

## Data Inferences

These visualizations are based off of an NCAA data set which contains schools and scores from 2004 to 2014.

### Sports with the Highest Cumulative Score

After visualizing the data I have noticed that in 2014 Women's Basketball athletes had the highest cumulative academics scores. Another conclusion I came to was that Women's student athlete tended to do better than their Male counterparts. Despite the fact that Exclusively male sports tend to be treated with higher regard and have better funding.

### Average Academic Scores By Sport

By on average the student athletes with the highest scores are Women skiers. Following the trend of my original visualization. On average women student athletes have higher gpa's than their male counterparts. Also students in least popular sports tend to have higher academic scores.
